

SPACE PROPOSAL SYSTEM AND SPACE PROPOSAL METHOD

[ABSTRACT]

A space proposal system (100) includes: a first obtainer (22)
5 that obtains space design data indicating a state of a design space; a
calculator (23) that calculates a spatial distribution of environmental
information in the design space, based on the space design data; and
a determiner (24) that determines, based on the spatial distribution
10 calculated, whether an environment in the design space satisfies a
determination criterion used for environmental certification for a
physical space.
