

ABSTRACT

This application discloses a discontinuous reception control method and apparatus, a terminal, and a readable storage medium, and pertains to the field of communications technologies. The method includes: performing, by a first terminal, a first operation during sidelink-based transmission, where the first operation includes at least one of the following: the first terminal determines a status of whether to send a hybrid automatic repeat request HARQ feedback, and the first terminal decodes a data packet; and determining, by the first terminal based on an execution result of the first operation, whether to start a timer for controlling sidelink discontinuous reception.
