(54) Title: SIGNALING WHETHER TO USE A FIRST MERGE LIST OR A SECOND MERGE LIST IN VIDEO CODING

FIG. 16

(57) Abstract: Example devices, methods, and computer-readable media are disclosed for decoding video data. An example method includes determining to decode a current block of the video data using a merge mode. The example method includes obtaining a flag from a bitstream. The example method includes determining, based on a value of the flag, to use a second merge list of two merge lists for the current block, wherein the second merge list is based on a first merge list of the two merge lists. The example method includes decoding the current block based on the second merge list.
