(54) Title: A CART FOR TRANSPORT AND STORAGE OF ITEMS

(57) Abstract: A cart (100) for storage of items, such as air passenger luggage, and transport thereof between, e.g., airport sorting apparatus and aircrafts, comprises a chassis (104) and a storage section (102). The storage section comprises one or more shelves (108), each of which is inclined with respect to the chassis (104), to allow items to be moved under the action of gravity between a loading end (114) and an unloading end (116) of the cart (102). A releasable closure structure (118) is provided at the lower end of the shelf (108). The closure structure may form a continuation of the shelf (108) when in its non-closing position. The cart is suited for automatic or manual loading and unloading of items.
