

Claims:

1. A trending list display method, comprising:

acquiring a screen height of a screen of an electronic device and using the screen height as a page height of a video play page;

5 determining a blank area on the video play page according to the page height and an original height of a trending list in a case where an original number of video items are completely displayed in the trending list;

adjusting the original number according to the blank area to obtain a target number of to-be-displayed video items in the trending list; and

10 displaying the trending list on the video play page and displaying video items of trending videos whose number is the target number in the trending list,

wherein adjusting the original number according to the blank area to obtain the target number for the to-be-displayed video items in the trending list comprises:

15 determining a height of the blank area according to the page height, the original height, and a control height preset for a control on the video play page;

in response to the height of the blank area being less than 0, reducing the original number and using the reduced original number as the target number to completely display the trending list on the video play page; and

20 in response to the height of the blank area being greater than a preset display height of a single video item, increasing the original number and using the increased original number as the target number to reduce the blank area on the video play page, wherein the preset display height of the single video item is preset for displaying each single video item in the screen of the electronic device; and

25 wherein displaying the trending list on the video play page comprises: displaying respective video items of trending videos in the trending list according to the preset display height of the single video item.

2. The method of claim 1, further comprising:

determining a screen type of the screen of the electronic device, wherein the screen type comprises a full screen and a non-full screen; and

determining the original number of to-be-displayed video items in the trending list according to the screen type.

3. The method of any one of claims 1 to 2, wherein displaying the trending list on the video play page comprises:

5 displaying the trending list in a floating-window manner on the video play page, and playing a preset background video of the trending list on the video play page.

4. The method of claim 3, wherein the blank area comprises a first blank area located above an original list display area and a second blank area located below the original list display area, and displaying the trending list in the floating-window manner on the video play page comprises:

10 determining, according to a preset display height of a single video item, a second target height of the trending list in a case where the video items whose number is the target number are displayed in the trending list;

adjusting a height of the first blank area and a height of the second blank area to adjust the display area of the original list to a target list display area, wherein a height of the target list display area is the second target height; and
15

displaying, in the target list display area, the trending list in the floating-window manner.

5. The method of claim 4, wherein each original video frame of the preset background video contains a blurred area, and playing the preset background video of the trending list on the video play page comprises:

20 performing scaling processing on each original video frame of the preset background video of the trending list to adjust the blurred area in the each original video frame to have at least one of a same height or a same width as the target list display area;

clipping each scaling-processed original video frame into a target video frame conforming to a dimension of the video play page to obtain a target background video corresponding to the preset background video; and
25

playing the target background video on the video play page.

6. The method of any one of claims 1 to 2, wherein displaying the target number of video items of trending videos in the trending list comprises:

completely displaying, in a first display area of the trending list, current video items whose

number is the target number and which are contained in a current list page, and partially displaying, in a second display area of the trending list, next video items whose number is the target number and which are contained in a list page next to the current list page.

7. A trending list display apparatus, comprising:

- 5 a height acquisition module configured to acquire a screen height of a screen of an electronic device and use the screen height as a page height of a video play page;

an area determination module configured to determine a blank area on the video play page according to the page height and an original height of a trending list in a case where an original number of video items are completely displayed in the trending list;

- 10 a number adjustment module configured to adjust the original number according to the blank area to obtain a target number of to-be-displayed video items in the trending list; and

a list display module configured to display the trending list on the video play page and display video items of trending videos whose number is the target number in the trending list,

wherein the number adjustment module is further configured to:

- 15 determine a height of the blank area according to the page height, the original height, and a control height preset for a control on the video play page;

in response to the height of the blank area being less than 0, reduce the original number and using the reduced original number as the target number to completely display the trending list on the video play page; and

- 20 in response to the height of the blank area being greater than a preset display height of a single video item, increase the original number and using the increased original number as the target number to reduce the blank area on the video play page, wherein the preset display height of the single video item is preset for displaying each single video item in the screen of the electronic device; and

- 25 wherein the list display module is further configured to: display respective video items of trending videos in the trending list according to the preset display height of the single video item.

8. An electronic device, comprising:

at least one processor; and

a memory configured to store at least one program,

wherein when executed by the at least one processor, the at least one program causes the at least one processor to perform the trending list display method of any one of claims 1 to 6.

- 5 9. A computer-readable storage medium storing a computer program which, when executed by a processor, causes the processor to perform the trending list display method of any one of claims 1 to 6.
