INFLATABLE STRUCTURE(S)

10 ABSTRACT: The invention relates to inflatable structure(s) comprising large openings that are formed by construction elements that can be used to dimension a base module. The aforementioned module comprises means that can be used to increase the number of surfaces of same. According to the invention, some or all of the inner peripheries of the large openings may or may not be equipped with a band of fabric comprising fixing means which are used to fit accessories, netting, a sail, cords, handles, thereby enabling multiple applications.
