

Method and Knitting Machine for the Production of Knitted Goods with Horizontal Stripe Patterns

5 Abstract

A method and a knitting machine for the production of knitting goods with horizontal stripe patterns are described. The invention lies in that a comparatively wide thread changing device (12) having a plurality of thread fingers (141 to 146) can be associated with two knitting points (68a, 68b) in such a manner that a first portion of the threads (15) guided by the thread changing device (12) can be fed to one knitting point (68b) and another portion of the threads (15) can be fed to the other knitting point (68a) or to the knitting tools (2) respectively moved there into a thread pick-up position (69).
