TASK PROCESSING METHOD, APPARATUS, DEVICE AND SYSTEM, AND STORAGE MEDIUM

ABSTRACT

The disclosure relates to a task processing method, apparatus, device and system, and a storage medium. The method includes: receiving a resource schedule request of a target task sent by a terminal, the resource schedule request including source data configuration information and running configuration information of the target task; determining task source data of the target task according to the source data configuration information; creating and starting a target container in a target resource node according to the running configuration information; determining a route entry according to the target container and sending the task source data to the target resource node; and sending a resource schedule completion message to the terminal, so that the terminal calls the target container and the task source data to execute the target task through the route entry.
