

ABSTRACT

METHOD AND APPARATUS FOR DETERMINING INITIAL BANDWIDTH PART BWP, AND STORAGE MEDIUM

A method and an apparatus for determining an initial bandwidth part BWP are provided. The
5 method includes: determining a frequency resource of a first initial BWP, where the frequency
resource of the first initial BWP is included in a frequency resource of a second initial BWP, the
frequency resource of the first initial BWP corresponds to a first-type terminal device, the
frequency resource of the second initial BWP corresponds to a second-type terminal device, and
the terminal devices of two types have different capabilities. The solutions provided in
10 embodiments of this application provide a new method for determining a BWP, so that a system
supports terminal devices of different types and required system bandwidth is reduced.
