(54) Title: HANDHELD EXCITATION TERMINAL AND EMF EMITTER PROVIDING DYNAMIC OPTIMIZATION OF EMISSION AND THERAPEUTIC EFFECT AND REMOTE THERAPEUTIC SYSTEM

FIG. 11

(57) Abstract: A cell excitation terminal and a therapeutic system using customized electromagnetic (EM) waves varying dynamically with time for excitation include one or more EM wave generators, each of the EM wave generators is connected to a central processing unit (CPU), and the CPU controls, according to a signal detected by a human body status detection device, the EM wave generator to send EM waves corresponding to a detected status or subject patient. The therapeutic system can perform remote management. A remote server optimizes and updates therapeutic waveforms of a patient constantly according to a therapeutic effect of the patient, thereby improving the therapeutic effect constantly.
