(54) Title: SYSTEMS, METHODS AND COMPUTER-READABLE MEDIA FOR MIGRATING DATA

(57) Abstract: This disclosure relates to a method comprising: copying rows from an origin database to a target database; iteratively performing: calculating for a row in the target database a first hash value; mapping the first hash value to a position in the target hash array, the target hash array being longer than the first hash value; incorporating the first hash value into the target hash array at the position; iteratively performing: calculating for a row in the origin database a second hash value; mapping the second hash value to a position in the origin hash array, the origin hash array being longer than the second hash value; incorporating the second hash value into the origin hash array at the position; and comparing the origin hash array to the target hash array to verify the multiple rows in the target database against the multiple rows in the origin database.
