Abstract

The invention is a floor-standing therapeutic device of superimposed natural torsion field energy generators with infrared, including the head, the arm and the base. Three sets of 64 torsion filed energy columns generators in a square array are arranged in a fixed front-to-back arrangement in the head, two 64-pillar/column array generators facing forward and one 64-pillar/column array generator backwards. The sum of the heights of the energy columns at the ends of one diagonal is equal to s sum of the heights of the energy columns at the ends of the other diagonal in a rectangle. The arm includes a fulcrum device, the first spreading arm assembly, an articulation device and the second spreading arm assembly, the fulcrum device is fixedly connected to the base, which makes the adjustment of the head more convenient and stable, and provides good stability for the head.
