

ABSTRACT

The present invention provides a pharmaceutical formulation for treating alopecia, a preparation method therefor and the use thereof. Specifically, the present invention provides a formulation or composition for treating alopecia, comprising the following active components on the basis of the mass percentage (w/w) or mass/volume percentage (w/v): (a) 5% of minoxidil; and (b) 0.07-0.095% of finasteride; the formulation or the composition is a foaming agent or a liniment; and when the formulation is a foaming agent, the total mass in the mass percentage does not contain the mass of a propellant. The foaming agent and liniment of the present invention take effect quickly and have good effects and few side effects.
