Abstract

COMBINED STEEL SHEET PILE CONNECTION JIG AND COMBINED STEEL SHEET PILE CONNECTION METHOD

A combined steel sheet pile connection jig includes: a guide portion having the same shape as that of a fitting portion of a combined steel sheet pile; a first positioning portion which comes into sliding contact with a pair of arm portions of the combined steel sheet pile along an arrangement direction of the pair of arm portions; a second positioning portion which restricts further movement of the guide portion when the guide portion is moved along the arrangement direction and is aligned at a position relative to the fitting portion; and an abutting portion which abuts an upper edge of the combined steel sheet pile.
