

ABSTRACT

Plant cultivation device

The invention concerns a plant cultivation device (1). The device (1) comprises a receptacle (2) having at least one peripheral wall (21) and a bottom wall (22). The bottom wall (22) has at least one hole (23) opening into an irrigation tube (25), a region of the bottom wall (22) around the, or each, hole (23) comprising guide means adapted to guide roots of a plant around the corresponding hole (23) to keep the irrigation tube (25) substantially clear.

The invention also concerns a cartridge comprising a substrate, adapted to be positioned in this receptacle, the cartridge having a lower face comprising at least one relief adapted to cooperate with the guide means of the receptacle.
