

ABSTRACT

Provided is a sterilization method for a water system, the sterilization method being
5 capable of suppressing the production amount of a nitrosamine compound while exhibiting
a sufficient sterilization effect in precursor-containing water that contains a nitrosamine
compound precursor. In the sterilization method for a water system, a stabilizing
composition containing a bromine-based oxidizing agent or a chlorine-based oxidizing
agent and a sulfamic acid compound is added to the precursor-containing water that
10 contains the nitrosamine compound precursor.
