
101
Identify an event
102
Determine applicable management and control modes and available management and control modes
103
Determine a personalized output verification set
104
Determine an event attribute weight
105
Perform quantitative ranking on the verification mode set according to the event attribute weights and management and control attribute weights
106
Output verification modes according to the quantitative ranking

FIG. 1

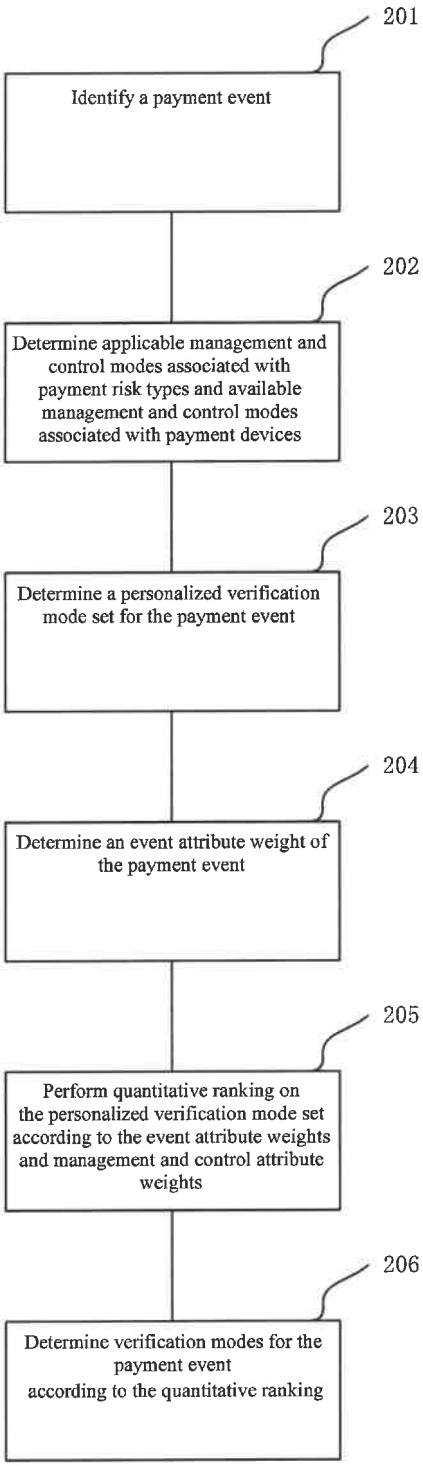

201
Identify a payment event
202
Determine applicable management and control modes associated with payment risk types and available management and control modes associated with payment devices
203
Determine a personalized verification mode set for the payment event
204
Determine an event attribute weight of the payment event
205
Perform quantitative ranking on the personalized verification mode set according to the event attribute weights and management and control attribute weights
206
Determine verification modes for the payment event according to the quantitative ranking
