

ABSTRACT

An environment data monitoring method, an environment data monitoring system, and an environment data monitoring apparatus are provided. The environment data monitoring method includes: obtaining, by a magnetic sensor(MS), a fan rotational speed; obtaining, by a first pressure sensor(S1), a first pressure; obtaining, by a second pressure sensor(S2), a second pressure; calculating, by a controller(EC), a first pressure difference between the first pressure and the second pressure; determining, by the controller(EC), whether or not the fan rotational speed and the first pressure difference reach an alarm standard; and sending, by the controller(EC), an alarm signal when the fan rotational speed and the first pressure difference reach the alarm standard.
