(54) Title: VACCINE COMPOSITION

(54) Titre : COMPOSITION VACCINALE

(57) Abstract: The invention concerns a tetravalent vaccine composition against Dengue comprising viruses of each of the attenuated strains filed with the CNCM at the Paris Pasteur Institute under reference numbers I-2480, I-2481, I-2482 and I-2483. The invention is characterised in that the relative amount of the viruses of each of the serotypes is such that the amount of virus of serotype 3 is less than the amount of virus of the other serotypes. In particular, the invention concerns a tetravalent composition wherein the amount of virus of each of the serotypes 1 to 4, per vaccinating dose, corresponds to the following formulations: 3,2,1,2 or 3,3,1,3 wherein the numbers represent the value of logs10 of the virus dilution required for infecting 50 % of the cells.

(57) Abrégé : L'invention a pour objet une composition vaccinale tétravalente contre la Dengue, comprenant des virus de chacune des souches atténuées déposées auprès de la CNCM à l'Institut Pasteur de Paris sous les références I-2480, I-2481, I-2482 et I-2483, caractérisée en ce que la quantité relative de virus de chacun des sérotypes est telle que la quantité de virus du sérotype 3 est inférieure à la quantité de virus des autres sérotypes. En particulier, l'invention a pour objet une composition tétravalente dans laquelle la quantité de virus de chacun des sérotypes 1 à 4, par dose vaccinante, répond à l'une des formulations suivantes: 3,2,1,2 ou 3,3,1,3 dans lesquelles les chiffres expriment les valeurs des logs 10 de la dilution de virus nécessaire pour infecter 50 % des cellules.
