(54) Title: BONE SHAVER

(57) Abstract

A bone shaver and its method of use are described. The bone shaver comprises a top plate (32) with a fixed handle (22) fixedly attached to the top plate and a bottom plate (40) slidably attached to the top plate. The top plate further comprises an anvil at its end. The bottom plate comprises a foot plate (42) and a cutting edge (44) on the foot plate. A moveable handle (24) is attached to the bottom plate. Movement of the moveable handle towards the fixed handle results in movement of the bottom plate towards the top plate. A cutting edge is provided on the foot plate to thereby cut tissue when the handles are squeezed together.
