[Abstract of the disclosure]

ACCOUNTING SYSTEM, USAGE FEE CALCULATION DEVICE, CONTROL METHOD, AND PROGRAM

Wireless communication devices (130 and 150) and a usage fee calculation device (110) are provided. The usage fee calculation device (110) includes a supply fee calculation section which calculates a fee for an amount of energy supply for a vehicle by a supply facility (C) by multiplying a difference between a start time remaining amount value of energy of the vehicle and an end time remaining amount value of energy of the vehicle by a unit price for supply per unit amount of energy, a time fee calculation section which calculates a fee for a time of use of a parking lot (P) by the vehicle by multiplying an elapsed time from a reception time of start time data to a reception time of end time data by a unit price per unit time for using the parking lot (P), and a usage fee calculation section which calculates a usage fee of the parking lot (P) based on the fee calculated by the supply fee calculation section and the fee calculated by the time fee calculation section.
