(54) Title: DEVICE

Figure 42

(57) Abstract: This application relates to a device (500) for inserting a tube into a body cavity of a patient, the device comprising: a tube; a probe (504); and a needle (502) configured to enter the body cavity, and to enable entry of the tube and the probe into the body cavity, wherein the device is configured such that the needle, the tube and the probe distally advance in the body cavity after entry of the probe into the body cavity, with the probe advancing distally beyond the needle. The application also relates to methods of use of such a device.
