Abstract

AUTOMATIC WAREHOUSE

Stations (8,9) of an automatic warehouse (2) are provided with transfer devices (10) for transferring an article one by one between a tray and a bucket, and hands (11, 12) of the transfer devices are provided with an ID tag reader and writer. The ID of the article stored in the bucket can be grasped and delivering products can be inspected, and further, data corresponding to each article can be written in the ID tag.
