(54) **Title:** ESTABLISHMENT OF CONNECTIONS TO A NETWORK

400

Fig. 4

(57) **Abstract:** Various aspects of the present disclosure relate to a UE for wireless communication. A processor is configured to cause the UE to transmit, to a first network entity, a first request message to establish a first PDN connection. The UE receives, from the first network entity, a first response message in response to the first request message, wherein the first response message indicates an establishment of the first PDN connection. The UE transmits, to a second network entity, a second request message to establish a second PDN connection, wherein the second request message indicates the UE capability for URSP provisioning in an EPS. The UE receives, from the second network entity, a second response message in response to the second request message. The second response message indicates an establishment of the second PDN connection, and indicates a second network entity capability for the URSP provisioning in the EPS.
