(54) Title: MAMMALIAN CELL LINES WITH GENE KNOCKOUT

(57) Abstract: Herein is reported a method for generating a recombinant mammalian cell expressing a heterologous polypeptide and a method for producing a heterologous polypeptide using said recombinant mammalian cell, wherein in the recombinant cell the expression of at least the endogenous gene MYC has been reduced. It has been found that the knockout of at least the endogenous gene MYC in mammalian cells, e.g. such as CHO cells, improves recombinant productivity by the cells.
