

SURFACE COVERING SYSTEM

Abstract

5 A surface covering system (110) for covering surfaces
with a covering material (120) is proposed,
particularly for covering wall surfaces or floor
surfaces with tile material. The surface covering
system (110) comprises at least two covering modules
10 (112), which can be placed on the surface so as to
adjoin each other. A first covering module (112) has at
least one first sealing profile (128, 130), and a
second covering profile (112) has at least one second
sealing profile (128, 132). The sealing profiles (128,
15 130, 132) are designed to engage each other in a
positioned state of the covering modules (112) and form
a common seal (134).
