

Abstract

5 A connector element (6) for connecting a flexfoil (1) and a
pin-like contact member (17), the connector element being made of a
conducting material and comprising a base part (13), at least one
clamping means (10) extending from a first side of the connector
element (6) for clamping said flexfoil (1) and at least one further
clamping means (10) extending from a second opposing side of the
connector element (6) for clamping said flexfoil (1), and wall
10 means (11; 22,23) arranged relative to said base part (13) to form
an opening for receiving said pin-like contact member (17).
