

Removal system

Abstract

The invention relates to a removal system (1) with an extraction head (2) that may be placed onto an opening of a bottle (3)), wherein the extraction head (2) has a closing means for closing the opening of the bottle (3). In the extraction head (2), a tube (5) is mounted such that when the extraction head (2) is placed onto the opening, the tube (5) projects into the bottle (3) and fluid (4) may be removed from the bottle (3) via the tube (5). An actuation mechanism is provided, by means of which the mounting of the tube (5) in the extraction head (2) may be released.
