

ABSTRACT
CHIP MEASUREMENT SYSTEM

There was a problem that, since the pattern of chips as gaming chips on the game table is complicated, the total amount of chips as gaming chips bet on the game table (4) is difficult to be judged by image analysis technology. In a measurement system according to the present invention, a management control device (14) that measures a total value of chips (120) bet on the game table (4) using an image analysis result obtained by an image recording device (300) is provided. Further, the chip (120) as the gaming chip to be used in this system has a multilayer structure in which a plurality of plastic layers having different colors are laminated including at least a colored layer (121) in the middle thereof, and a white layer (122) or a light color layer (may be a layer having a lighter color than the colored layer although not illustrated) is laminated on both sides of the intermediate colored layer (121).
