

CASINO MEMBER MOBILE DEVICE SOFTWARE OPERATION SYSTEM

Abstract

A casino member mobile device software operation system
5 to allow a player's mobile device to download a casino
member mobile device software includes a mobile device
software server, at least one human machine platform and a
network exchanger. The mobile device software server stores
the casino member mobile device software. The human
10 machine platform has a Universal Serial Bus (USB) slot to
allow the player to insert the mobile device to perform data
transmission between the USB slot and the mobile device. The
network exchanger is connected to the human machine
platform and the mobile device software server to serve as a
15 data transmission medium between the human machine
platform and the mobile device software server. Thus the
player can get the casino member mobile device software and
operate a game operation console through the aid of the casino
member mobile device software to meet use requirements.
