

ABSTRACT

The present disclosure relates to a vehicle door unlocking method and apparatus, a system, a vehicle, an electronic device and a storage medium. The method includes: obtaining a distance between a target object outside a vehicle and the vehicle by means of at least one distance sensor provided in the vehicle; in response to the distance satisfying a predetermined condition, waking up and controlling an image collection module provided in the vehicle to collect a first image of the target object; performing face recognition based on the first image; and in response to successful face recognition, sending a vehicle door unlocking instruction to at least one vehicle door lock of the vehicle.
