

TITLE OF INVENTION: SOCKET GUIDER FOR TESTER FOR ELECTRONIC
PARTS

5

ABSTRACT

Disclosed herein is a socket guider for the testing of
electronic parts. The socket guider includes: a pair of
guider bodies provided to support both ends of an electronic
10 part to be inserted into an elongated test slit; and a pair of
elastic supporters replaceably coupled to the guider bodies,
respectively, and configured to maintain the posture of the
electronic part by elastically supporting both ends of the
electronic part while the contact terminal-side portion of the
15 electronic part is inserted into the test slit or in the state
in which the electronic part has been inserted into the test
slit. The pair of guider bodies are disposed on both sides of
the test slit, respectively, in a direction in which the test
slit is elongated. The pair of elastic supports are allocated
20 to the pair of guider bodies, respectively, and are detachably
installed in the guider bodies, respectively.
