

Chemical structure (I) is a complex molecule featuring a central benzene ring. The benzene ring is substituted with a hydroxyl group (HO) and a carbonyl group (C=O). The carbonyl group is part of an amide linkage (NH-C=O) that connects to a side chain containing a hydroxyl group (HO) and an amide group (NH-C=O). The side chain also includes a carbonyl group (C=O) and a hydroxyl group (HO). The molecule is further substituted with various groups, including a hydroxyl group (HO) and a carbonyl group (C=O). The structure is labeled (I) at the bottom right.

by intramolecular cyclization.
