

Abstract:

The invention provides a building elevator with an elevator platform, with an elevator mast and an elevator car which can be moved along the elevator mast, said building elevator being suitable, in the simplest manner possible, for transporting both passengers and goods.

This is achieved in that the elevator car (13) comprises at least one basic car module (1) which has a carrying platform (2) and at least one side part which is fixed thereto, preferably a side wall (3), and in that there are provided, in addition to the at least one fixed side wall (3), exchangeable side-wall parts (4, 5; 6, 7) and a roof covering (8) which is arranged releasably on the top side of the at least one fixed side wall (3).

Drawing to be published in this respect: Fig. 1.
