Glimepiride- And Insulin-Induced Glycosylphosphatidylinositol-Specific Phospholipase C Regulation

Abstract

The present invention refers to a method for identification of a chemical compound which modulates the activity of mammalian GPI-PLC wherein a] a mammalian cell is incubated with glimepiride; b] hcDIGs of the cells of a] are prepared; c] the hcDIGs from b] are incubated with a chemical compound; d] the activity of the GPI-PLC from the hcDIGs of c] is determined.
