

Abstract

Nucleosides Analogues, Such As Antivirals Including Inhibitors of Retroviral Reverse Transcriptase and the DNA Polymerase of Hepatitis B Virus (HBV)

A compound of formula Ig

where O-nuc is the residue of a monohydroxyl bearing D- or L- nucleoside analogue;

R<sub>2</sub> is the residue of an aliphatic L-amino acid,

p is 0, 1 or 2-20 (optionally including a double bond) and q is 0-5.
