(54) Title: METHODS AND SYSTEMS FOR WEB-BASED DATA PRESENTATION

(57) Abstract: Described embodiments relate to a method comprising determining a dataset container for controlling rendering of at least part of a dataset on a display of a computing device. The dataset comprises tabular data including a plurality of columns and a plurality of rows. Determining the dataset container comprises: determining a data structure comprising a plurality of data column objects, each data column object of the plurality of data column objects configured to represent a respective column of the plurality of columns of the tabular data; setting a display status value associated with each data column object; and determining a dataset presentation structure encapsulating at least a part of the dataset in accordance with the data structure and the display status values.
