Figure 1

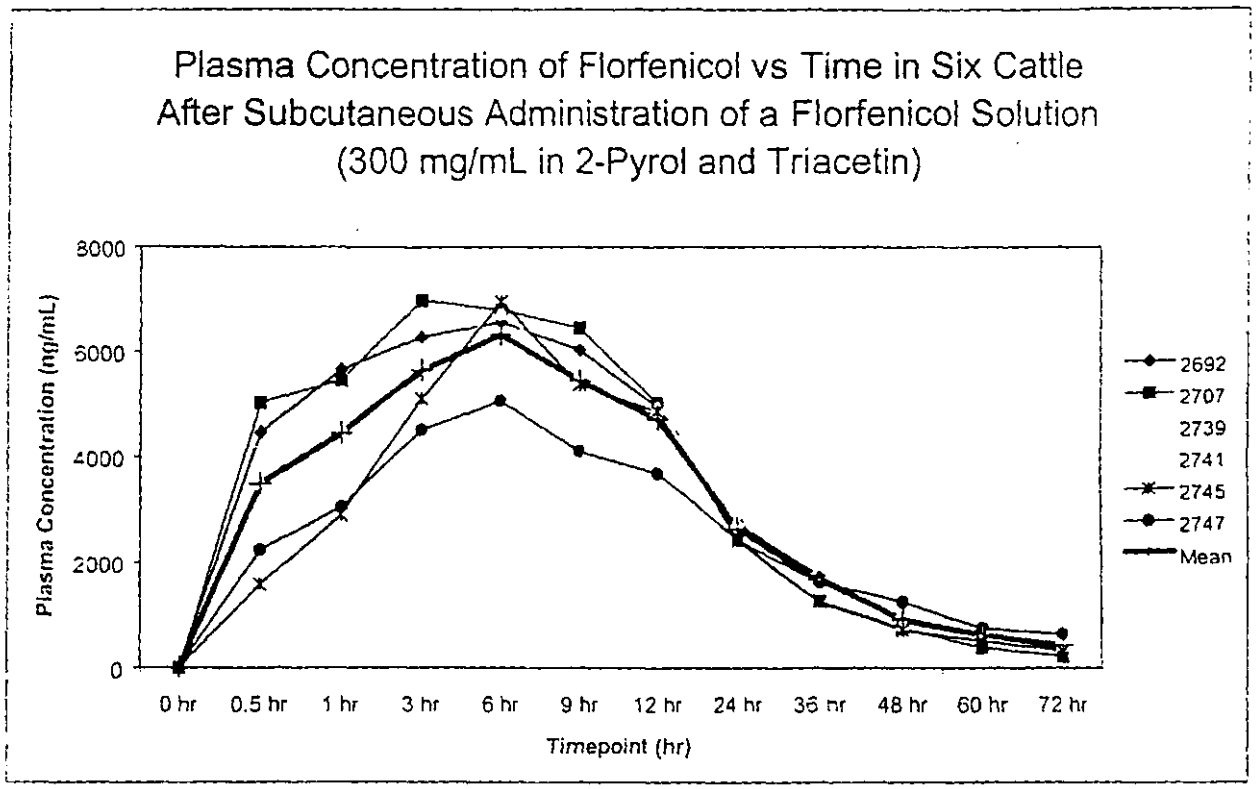

Figure 1 Plasma concentration of florfenicol vs time in six cattle after subcutaneous administration of a florfenicol solution at a dose of 40 mg per kg of body weight. Mean peak concentration (Cmax) was 6366 ng/mL (range of 5076-6995 ng/mL). Mean time to peak concentration (Tmax) was 5.5 hrs (range of 3-6 hrs).

Figure 2

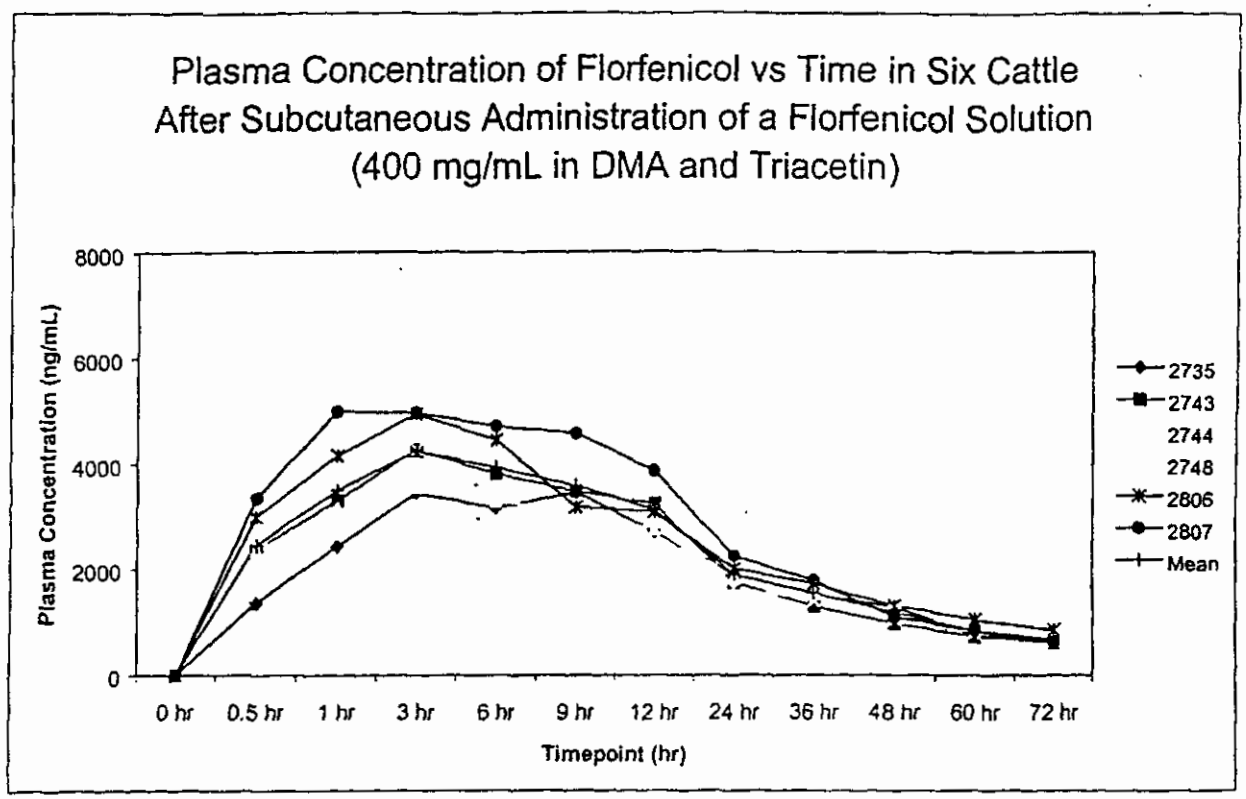

Figure 2 Plasma concentration of florfenicol vs time in six cattle after subcutaneous administration of a florfenicol solution at a dose of 40 mg per kg of body weight. Mean peak concentration (Cmax) was 4248 ng/mL (range of 3457-4996 ng/mL). Mean time to peak concentration (Tmax) was 3.67 hrs (range of 1-9 hrs).
