

ABSTRACT

The present application discloses a service processing method, a related apparatus, a device and a storage medium. The method of the present application comprises: acquiring a configuration information set for a target merchant; when running a built-in universal code of an interactive device, displaying a service home page according to the configuration information set, wherein the built-in universal code is a code written by a device producer; in response to an information acquisition prompt of the service home page, acquiring target biological information of a target object by means of an acquisition apparatus of the interactive device; and when a biometric identification service is not activated for a target object account, in response to an authorization activation operation from a target user terminal, displaying a service activation page. The present application does not require a lot of time and manpower to develop service codes, thereby reducing the development cost, and improving the development efficiency and code maintainability.
