(54) Title: SYSTEMS AND METHODS FOR PROVIDING ENHANCED SECURITY IN EDGE COMPUTING ENVIRONMENTS

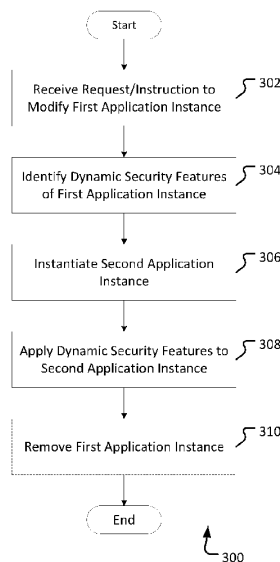

FIG. 3

(57) Abstract: Examples of the present disclosure describe systems and methods for providing enhanced security in edge computing environments. A first aspect describes a method for moving security features dynamically applied to an application at a first deployment location to an application at a second deployment location. A second aspect describes a method for locally expanding/contracting an instance of a deployed application. A third aspect describes a method for redirected network traffic associated with detected malicious conduct from a first application deployment environment to a secured second application deployment environment. A fourth aspect describes a method for performing multi-stage network traffic filtering.
