

DEVICE, PLANT MANAGEMENT SYSTEM, METHOD, AND PROGRAM

ABSTRACT

There are provided a device, a plant management system, a method, and a program that can more appropriately respond to an abnormality having occurred.

A device (30) that includes a display screen on which an operating state of a plant (1) is displayed includes: an abnormality detection unit (322) detecting that an abnormality has occurred in the plant (1); a response information DB (33C) in which response information on responses to abnormalities occurred in the past is stored; and a display control unit (324) that displays guidance information on guidance for responding to the abnormality and aggregation result information indicating results aggregated, based on the response information, for responses capable of being taken for abnormalities related to the abnormality, on the display screen in a case where the abnormality is detected.
