ABSTRACT

A method and an apparatus for establishing a multimedia call are provided. The method includes: determining whether a second terminal is in a multimedia call according to terminal identification information of the second terminal used by a user logged in a target application, in response to that a target multimedia call to be established in association with the user is triggered in a state that a first terminal used by the user logged in the target application is in a multimedia call; and establishing the target multimedia call based on an answering operation performed by a called party of the target multimedia call, in response to that the second terminal is not in any multimedia call.
