

CLAIMS

1. A pressure-sensitive adhesive tape package that accommodates an adhesive tape having a support and an adhesive agent layer provided on one surface of the support,

wherein the adhesive tape being bent into a first portion and a second portion such that the adhesive agent layer faces outward,

the pressure-sensitive adhesive tape package comprising: a first release sheet releasably attached to the adhesive agent layer of the first portion of the adhesive tape, and a second release sheet releasably attached to the adhesive agent layer of the second portion of the adhesive tape to seal the adhesive tape with the first release sheet between the first and second release sheets,

the first release sheet and the second release sheet are superimposed,

a portion surrounding the adhesive tape in which the first release sheet and the second release sheet are superimposed is sealed,

the second portion of the adhesive tape is larger than the first portion of the adhesive tape, and the second portion has an extending portion that extends from the first portion,

temporary attaching means is provided in at least a part of a portion facing the extending portion in a portion of the first release sheet, and

an adhesive force of the support of the adhesive tape to the first release sheet through the temporary attaching means is larger than an adhesive force of the adhesive agent layer to the second release sheet.

2. A pressure-sensitive adhesive tape package that accommodates an adhesive tape having a support and an adhesive agent layer provided on one surface of the support,

wherein the adhesive tape being bent into a first portion and a second portion such that the adhesive agent layer faces outward,

the pressure-sensitive adhesive tape package comprising: a first release sheet releasably attached to the adhesive agent layer of the first portion of the adhesive tape, and a second release sheet releasably attached to the adhesive agent layer of the second portion of the adhesive tape to seal the adhesive tape with the first release sheet between the first and second release sheets,

the first release sheet and the second release sheet are superimposed,

a portion surrounding the adhesive tape in which the first release sheet and the second release sheet are superimposed is sealed,

the first portion of the adhesive tape is substantially in the same shape as that of the second portion of the adhesive tape,

temporary attaching means is provided between the first portion of the adhesive tape and the second portion of the adhesive tape, and

an adhesive force of the temporary attaching means is larger than the adhesive force of the adhesive agent layer to the release sheet.

3. The pressure-sensitive adhesive tape package according to claim 1 or 2, wherein at least one projecting point projecting outward is formed in an outer edge of a face-to-face joint portion joining the first release sheet to second release sheet in a face-to-face relationship to seal therebetween.

4. The pressure-sensitive adhesive tape package according to any one of claims 1 to 3, wherein means for reducing an adhesive force that reduces an adhesive force between the adhesive agent layer of the second portion of the adhesive tape and the second release sheet is provided on at least a part of the second release sheet.

5. The pressure-sensitive adhesive tape package according to claim 4, wherein the means for reducing an adhesive force is a silicone-treated surface provided on at least a part of a portion of the second release sheet that is

attached to the adhesive agent layer of the second portion of the adhesive tape.

6. The pressure-sensitive adhesive tape package according to claim 4, wherein the means for reducing an adhesive force is an embossed surface and/or sanded surface provided on at least a part of the portion of the second release sheet that is attached to the adhesive agent layer of the second portion of the adhesive tape.

7. The pressure-sensitive adhesive tape package according to any one of claims 1 to 6, wherein the temporary attaching means has adhesiveness to the support of the adhesive tape.

8. The pressure-sensitive adhesive tape package according to any one of claims 1 to 7, wherein the adhesive tape is used for medical care and applied to a skin or a mucous membrane.

9. An application method using the pressure-sensitive adhesive tape package according to any one of claims 1 to 8, the method comprising: removing the second release sheet, and exposing the adhesive agent layer of the second portion of the adhesive tape; placing the exposed portion on a portion for application or in the vicinity of the portion for application; then, pulling the first release sheet in a direction in which the adhesive tape is released from the first release sheet while the first release sheet is held, thereby to apply the pressure-sensitive adhesive tape.

CLAIMS

1. A pressure-sensitive adhesive tape package that accommodates an adhesive tape having a support and an adhesive agent layer provided on one surface of the support,

wherein the adhesive tape being bent into a first portion and a second portion such that the adhesive agent layer faces outward,

the pressure-sensitive adhesive tape package comprising: a first release sheet releasably attached to the adhesive agent layer of the first portion of the adhesive tape, and a second release sheet releasably attached to the adhesive agent layer of the second portion of the adhesive tape to seal the adhesive tape with the first release sheet between the first and second release sheets,

the first release sheet and the second release sheet are superimposed,

a portion surrounding the adhesive tape in which the first release sheet and the second release sheet are superimposed is sealed,

the second portion of the adhesive tape is larger than the first portion of the adhesive tape, and the second portion has an extending portion that extends from the first portion,

temporary attaching means is provided in at least a part of a portion facing the extending portion in a portion of the first release sheet,

an adhesive force of the support of the adhesive tape to the first release sheet through the temporary attaching means is larger than an adhesive force of the adhesive agent layer to the second release sheet, and

means for reducing an adhesive force that reduces an adhesive force between the adhesive agent layer of the second portion of the adhesive tape and the second release sheet is provided on at least a part of the second release sheet.

2. A pressure-sensitive adhesive tape package that accommodates an

adhesive tape having a support and an adhesive agent layer provided on one surface of the support,

wherein the adhesive tape being bent into a first portion and a second portion such that the adhesive agent layer faces outward,

the pressure-sensitive adhesive tape package comprising: a first release sheet releasably attached to the adhesive agent layer of the first portion of the adhesive tape, and a second release sheet releasably attached to the adhesive agent layer of the second portion of the adhesive tape to seal the adhesive tape with the first release sheet between the first and second release sheets,

the first release sheet and the second release sheet are superimposed,

a portion surrounding the adhesive tape in which the first release sheet and the second release sheet are superimposed is sealed,

the first portion of the adhesive tape is substantially in the same shape as that of the second portion of the adhesive tape,

temporary attaching means is provided between the first portion of the adhesive tape and the second portion of the adhesive tape,

an adhesive force of the temporary attaching means is larger than the adhesive force of the adhesive agent layer to the release sheet, and

means for reducing an adhesive force that reduces an adhesive force between the adhesive agent layer of the second portion of the adhesive tape and the second release sheet is provided on at least a part of the second release sheet.

3. The pressure-sensitive adhesive tape package according to claim 1 or 2, wherein at least one projecting point projecting outward is formed in an outer edge of a face-to-face joint portion joining the first release sheet to second release sheet in a face-to-face relationship to seal therebetween.

4. The pressure-sensitive adhesive tape package according to any one of claims 1 to 3, wherein the means for reducing an adhesive force is a silicone-treated surface provided on at least a part of a portion of the second release sheet that is attached to the adhesive agent layer of the second portion of the adhesive tape.

5. The pressure-sensitive adhesive tape package according to any one of claims 1 to 3, wherein the means for reducing an adhesive force is an embossed surface and/or sanded surface provided on at least a part of the portion of the second release sheet that is attached to the adhesive agent layer of the second portion of the adhesive tape.

6. The pressure-sensitive adhesive tape package according to any one of claims 1 to 5, wherein the temporary attaching means has adhesiveness to the support of the adhesive tape.

7. The pressure-sensitive adhesive tape package according to any one of claims 1 to 6, wherein the adhesive tape is used for medical care and applied to a skin or a mucous membrane.

8. An application method using the pressure-sensitive adhesive tape package according to any one of claims 1 to 7, the method comprising: removing the second release sheet, and exposing the adhesive agent layer of the second portion of the adhesive tape; placing the exposed portion on a portion for application or in the vicinity of the portion for application; then, pulling the first release sheet in a direction in which the adhesive tape is released from the first release sheet while the first release sheet is held, thereby to apply the pressure-sensitive adhesive tape.
