

ABSTRACT

WASHING MACHINE

5 This invention includes: a storage case including powdered detergent container (32a), a liquid detergent container, and a softener container; and water pouring case (31) pouring water into the storage case. This invention includes: first water channel (31a) being disposed in water pouring case (31) and pouring water to powdered detergent container (32a); and first water
10 supply valve (34a) communicating with first water channel (31a). This invention includes: a second water channel being disposed in water pouring case (31) and pouring water to powdered detergent container (32a) and the liquid detergent container; and a second water supply valve communicating with the second water channel. This invention includes: a third water channel
15 being disposed in water pouring case (31) and pouring water to the softener container; and a third water supply valve communicating with the third water channel. This invention includes nozzles (31d, 31e, 31f) being disposed in first water channel (31a) and the second and third water channels and pouring water to powdered detergent container (32a) and the liquid and softener
20 detergent containers.
