

ABSTRACT

Embodiments of the present disclosure provide a method, an apparatus for processing video, an electronic device, and a computer-readable storage medium. The method includes:

5 transmitting a request for acquiring a video to a server when current display information in a user interaction interface is preview information of the video, wherein, the request for acquiring the video comprises identification information of the video; receiving video information corresponding to the video pushed by the server based on the request for acquiring the video; and displaying the video information through a video preview window,

10 wherein the video preview window is suspended above the user interaction interface. According to the embodiments of the present disclosure, the user can preview video information corresponding to respective video through a video preview window in the user interaction interface, that is, the user can directly select a video of interest by using the video information displayed in the video preview window, without entering the video playing

15 screen, which improves the user's interactive experience.
