

ANTICANCER FUSION PROTEIN

Abstract

A fusion protein comprising domain (a) which is a functional fragment of hTRAIL protein sequence, which fragment begins with an amino acid at a position not
5 lower than hTRAIL95, or a homolog of said functional fragment having at least 70% sequence identity; and domain (b) which is a sequence of an immunostimulating effector peptide, wherein the sequence of domain (b) is attached at the C-terminus or N-terminus of domain (a). The fusion protein can be used for the treatment of cancer diseases.
