## (54) Title: METHOD FOR ASSOCIATING THIRD PARTY CONTENT WITH ONLINE DOCUMENT SIGNING

Fig. 1

(57) Abstract: Techniques for electronic signature process management are described. Some embodiments provide an electronic signature service ("ESS") configured to associate third-party content with electronic signature documents by way of dynamic form fields. A dynamic form field is associated with a data store and an electronic signature document. The ESS may automatically populate the dynamic form field with data obtained from the associated data store. If a signer changes the data of the dynamic form field, the ESS may write back the changed data to the data store.
