

ABSTRACT

A colored resin composition with which a resin black matrix having a high adhesion and a high chemical resistance can be easily formed is provided. Further, by using the color resin composition of the present invention, a black matrix

5 substrate having an excellent reliability can be obtained. The present invention provides a colored resin composition containing at least (A) a color pigment; (B) an alkali-soluble resin, (C) an adhesion promoter and (D) an organic solvent, wherein the composition contains a specific silane coupling agent as the (C) adhesion promoter.
