(54) Title: ELECTRIC CONNECTION ARRANGEMENT FOR ELECTRONIC DEVICES

(57) Abstract: An electric connection arrangement for electronic devices of the type comprising a printed circuit board (11) carrying at least one electronic component (12, 13, 14, 15) and at least two binding posts (12a, 16) to be electrically connected to an external system that will be operatively associated with the electronic device (10). The electric connection arrangement comprises a housing (20) made of a non-conducting material that is internally provided with contact elements (21, 25) electrically coupled to the external system and which are to be seated, each one to a respective binding post (12a, 16) of the electronic device (10), when the latter is fitted into the housing (20), at least one of said contact elements (21) being seated, by elastic deformation, against the respective binding post (12a, 16) of the electronic device (10).
