

Abstract

Upper rudder carrier bearing

In order to provide an upper rudder carrier bearing (100) for the mounting of a rudder post (54) of a rudder (50) of a watercraft, in particular a ship, which overall simplifies the mounting structure of the rudder post and reduces the maintenance expenditure, the rudder carrier bearing (100) comprises a bearing housing (10), in particular comprising a housing base body (12) and a housing cover (11), wherein an axial and a radial bearing (30, 20) are disposed in the bearing housing (10), which are both configured as plain bearings and wherein the axial and/or the radial bearing (30, 20) is configured as a self-lubricating bearing.
